Manda Hararo 2026 — physical distributed source

trace-supported fit to the 30-m (GSLC) inputs · strike 152.6° · east fault dips 65° toward the axis

Opening max 2.52 m · volume 0.152 km³ · fault max 0.61 m · fault/dike potency 0.11 (area × slip over area × opening; not a moment-tensor ratio).

The 2005–2010 geometry-reuse comparison awaits the external geometry files.
