Manda Hararo 2026 — free E-N-U decomposition

reprocessed 30-m (GSLC) inputs · 1.28-km cells · weighted solve on ≥3 of 4 LOS geometries · positive east, north, and up

No smoothing; gray = no solution; in the closure panel gray also covers three-geometry cells, which have no closure value.
Formal σ uses far-field scatter only. Red/dashed lines show the mapped dike and east-ridge context, not a solve constraint.
