Manda Hararo 2026 — physical distributed source

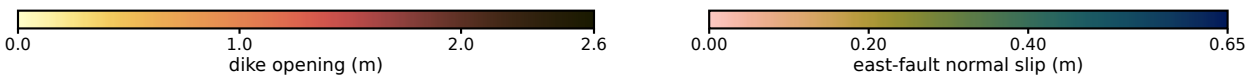

trace-supported fit to the 30-m (GSLC) inputs · strike 153.0° · east fault dips 65° toward the axis

Opening max 2.38 m · volume 0.176 km³ · fault max 0.61 m · fault/dike potency 0.10 (area × slip over area × opening; not a moment-tensor ratio).
The 2005-plane refit is in the Wright-2006 summary figures; the 2006–2010 geometry and opening files are still awaited.
